

Acknowledgements and Co-authorship Policy for the CECAD Facilities

Personnel in core facilities provide essential services to their users. It is important to recognize their contributions to the scientific advancement of the projects. The type of appropriate appreciation may differ depending on the projects and input.

References to the facilities are a crucial metric of the value of core facility services and enables them to demonstrate the importance for the Cluster and the University. This ultimately helps to justify the need for existing and new equipment. For our records, we kindly ask the authors to send us the reference of the papers or thesis.

Here we present a guideline how to cite the CECAD Facilities in the future.

1. The Investigators are **always** requested to recognize the role of the CECAD Facilities in producing data for publication or thesis in the **acknowledgement** section of the manuscript.

2. Core facilities must charge for services to cover service contracts, pay for software updates and consumables. **Charging for services does not preclude authorship** on manuscripts. If the scientific facility members have made a substantial intellectual and/or experimental contribution to a publication, they should be treated as any other co-author.

We kindly ask the Principal Investigators to sign this document and thereby accept our guidelines. Not following these rules will ultimately lead to the exclusion from our facility resources.

I have read and agreed to the Acknowledgements and Co-authorship Policy for the CECAD Facilities

I do NOT agree
